---

If your HDD is damaged, this program will help you to prolong the working life of your computer . The drive will help to check any physical defects, which are often too small to be detected by the hard disk manufacturers' tools. The main functions of this program: 1. Segmentation of sectors, which may have physical defects, such as bad sectors. This is particularly important to us, because bad sectors increase considerably the chance of failure of an operating system. 2. The drive will check the dynamic load, that is, with the introduction of sectors will be immediately detected and will be removed. 3. Upon detection of sectors with physical defects, the computer will be immediately removed from operation. 4. The Hard Disk Regenerator will help to clean dirty tracks. Dirty tracks will cause the operating system to have a sudden crash due to an error, which occurred. 5. The speed of the Hard Disk Regenerator will save, such as those found on computer virus infections. 6. The drive will help to check the memory and the stability of the operating system. Hardware Hardware system requirements are Windows XP or above. User has to reinstall operating system. Software The software is available for free download. It contains a convenient wizard, which will help to choose correct settings. References External links Official website Category:Data recovery software
